

**Company: Dent Fix**

**Product: The Extender**

When access is limited or obstructed either by a structural member or other component, Dent Fix has a solution: The Extender, a spot weld drill bit extension that adds 6.5" of length, letting you get to those deep and hard-to-reach spot welds. The plastic sleeve protects any nearby structures from damage and cables from getting tangled. You can stabilize the drill point by holding here. Works with any 3/8" drill. Recommended not to exceed 1,800 rpm. Includes DF-1480 8mm HSCo drill bit. The Extender accepts any of our spot weld drill bits: DF-1480 8mm HSCo Spot Weld Drill Bit, DF-1680T 8mm Titanium Coated Spot Weld Drill Bit, DF-1610 10mm HSCo Spot Weld Drill Bit and DF-1610T 10mm Titanium Coated

Spot Weld Drill Bit. *Category: Tool accessories.*

**Company: Snap-on Equipment**

**Product: Quadriga**

The Quadriga represents the first-ever application of a laser imaging system in the tire changer industry. It requires no manual steps or tool-to-wheel contact to break beads or to mount and demount tires. The Quadriga uses a patent-pending laser guidance system to automatically identify the wheel's edge and relies on patent-pending computer-controlled, robotic bead removal tools, delivering unparalleled accuracy and Do No Harm performance. The design of the bead removal tools eliminates the need for tire levers, multiple technicians and the worry of damaging expensive wheels. The Quadriga is designed with technician safety and ergonomics in mind. Manual lifting and other high-impact steps are eliminated, and the chances of injury or of damaging wheels are reduced. The Quadriga's patent-pending, intelligent wheel lift automatically measures tire diameter and positions the turntable at the wheel's center while the wheel is raised. The Quadriga is simple to operate with a single joystick control. *Category: Tire, wheel service.*

**Company: Automotive Solutions Inc.**

**Product: Automotive Inspection System**

Automotive Solution's Automotive Inspection System has been tailored to help repair shops bring in new traffic as well as sell more services to the customers they already have by tapping in to the millions of private party used car sales with this standardized electronic certification program. The system operates with a simple PDA interface for gathering data while guiding the technician through a series of inspection questions, noting areas that might need further attention. This data is then sent electronically to ASI's servers where it is analyzed and returned in certificate form via email. Custom-tailored coupons to generate up-sell opportunities and repeat business are built in. In addition to the "Pre-Purchase Inspection", other service levels include "Quick/Courtesy Inspection," "Tire Inspection" or "Vehicle Profile" for easy, electronic documentation of each customer. *Category: Computers & software.*

**Company: Global Leak Detection Corp.**

**Product: Pop-it Universal Fuel Cap Adapter**

The new reusable Smoke Wizard Pop-it Universal Fuel Cap Adapter (GLD034) eliminates the need to purchase expensive universal adapters that require the ongoing cost and waste of disposable seals. It also eliminates the need of having a different adapter for every style of fuel tank. The brilliantly simple Pop-it pops on the filler neck of virtually any vehicle for quick and easy EVAP leak testing. The Pop-it is made of a durable, fuel-resistant substrate that won't erode or crack. It can be used again and again indefinitely without needing replacement seals and is backed by a full

5-year warranty. The Pop-it is perfect for smoke-based leak detection or pressure/vacuum decay EVAP system testing. To use, simply remove the gas cap, pop the Pop-it onto the vehicle's fuel tank neck and connect any smoke machine or leak detection device. *Category: Leak detection.*
